

application.AddProductUse
Case.execute

application.SellProductUse
Case.execute

domain.product.Product.get
Stock

```
graph LR; A[application.AddProductUse Case.execute] --> D[domain.product.Product.get Stock]; B[application.SellProductUse Case.execute] --> D;
```

The diagram illustrates a dependency or data flow. On the left, there are two white rectangular boxes. The top box contains the text 'application.AddProductUse' on the first line and 'Case.execute' on the second line. The bottom box contains 'application.SellProductUse' on the first line and 'Case.execute' on the second line. On the right, there is a gray rectangular box containing 'domain.product.Product.get' on the first line and 'Stock' on the second line. Two blue arrows originate from the right side of the left boxes and point towards the left side of the gray box, indicating that both application use cases depend on or interact with the domain object.
